**CONCO SYSTEMS ANNOUNCES STRATEGIC
PARTNERSHIP WITH NITROCISION, LLC.**

Conco to Offer Exclusive NitroLance™ Liquid Nitrogen Cleaning

PITTSBURGH — February 01, 2008 — Beginning January 2nd 2008, Conco Systems' Industrial Services Division and Nitrocision LLC have entered a strategic partnership allowing Conco exclusive use of Nitrocision's liquid nitrogen cleaning technology in connection with its industrial cleaning division.

Conco's "*NitroLance*™" cleaning service will be the newest addition to their Industrial Services Division in addition to its already successful HydroDrill and Conco tube cleaning services. These technologies focus on cleaning fouled heat exchanger tubes at refineries, petrochemical and other industrial sites. The *NitroLance*™ will offer customers the ability to clean heat exchanger tubes with the same technology that is being used by NASA to peel layers of a protective substance off the space shuttle. "The system is powered by liquid nitrogen which is chemically inert and rapidly converts into a gas, the *NitroLance*™ virtually eliminates cross contamination and secondary waste streams which are crucial for many industries," says Javier Suarez, General Manager of Conco's Industrial Services Division in Houston, Texas.

New Solutions, New Customers for Conco

In addition to its large power generation customer base, Conco expects its new *NitroLance*[™] service to open doors in industries currently not being served including; catalyst loading, chemical manufacturing, refining, nuclear reactor cleaning, pharmaceutical manufacturing and more. The fact that the nitrogen gas cleans without the need for water and leaves virtually no residue is a boon to these industries where cross contamination precludes it from using faster and less expensive cleaning methods.

Conco *NitroLance*[™] Availability

Conco will be offering this break-through service to customers beginning in March 2008. “We are the exclusive service provider of this technology in our existing market and are excited about the benefits it brings to our existing and new customers” says Conco’s Suarez.

Founded in 1923, Conco is the worldwide leader in heat exchanger cleaning services to the power generation, petrochemical and refinery industries. In addition, Conco Systems provides non-destructive testing including eddy current, RFT, IRIS and tracer gas leak detection services utilizing exclusive technology.
