Conco Systems Announces West Coast Expansion

*New Office Represents Conco's Commitment to Providing
Total Heat Exchanger Performance™*

PITTSBURGH — August 2, 2010 — As a result of the continued growth of its condenser and heat exchanger services to power generation and industrial customers, Conco Systems announces the opening of a new full-service facility just north of Irvine, California. The facility will allow Conco to provide its Total Heat Exchanger Performance™ services including shell and tube cleaning, eddy current and remote-field testing and leak detection services to customers on the West Coast more effectively.

“Conco’s offices in California will position us closer to our customers on the West Coast allowing more rapid deployment of crews at a greater cost savings to our customers” says Jason Wilburn, Vice President of Non-Destructive Testing for Conco. “When combined with our existing network of offices in Pittsburgh, Baltimore and Houston, the California facility made perfect sense and is fully operational at this time” says Wilburn.

Power generation and industrial customers nationwide can access Conco’s products and services through a convenient toll-free number, 1-800-345-3476 or by visiting the company website at www.concosystems.com.
