

## **Conco Systems Leads the Way in Fast and Effective Liquid Nitrogen Cleaning**

February 3, 2014

**Verona, PA**—For years, [Conco Systems](#) has been at the forefront of developing new and innovative ways to keep condensers and heat exchangers running efficiently by achieving the highest level of cleanliness. While Conco introduced the world's first mechanical tube cleaner in 1923, and has continued to improve on their own design, they have also created and honed new methods for cleaning that are already proven to be successful.

Conco's [NitroLance™](#) technology harnesses the power of liquid nitrogen to remove incredibly difficult deposits that conventional methods, like hydrolancing and chemical cleaning, leave behind. Not only does liquid nitrogen clean and restore flow more efficiently, but it also readily dissipates, saving the customer thousands of dollars by eliminating the need to clean up secondary waste.

The NitroLance™ works by sending a powerful stream of liquid nitrogen through cracks in the solid deposit. Once the liquid nitrogen is inside the deposit, it rapidly expands and breaks through the deposit, causing it to be removed from the surface from which it was stuck. Not only can the NitroLance™ be used in the power generation industry for cleaning pre-heaters, but it can also be used to tackle industrial cleaning jobs like sulfur recovery units in petrochemical refineries. The NitroLance™ is equipped to handle any job, large or small, horizontal or vertical, hands-free or manual, which cannot be accomplished by your plant's normal cleaning routine. The NitroLance™ has the ability to clean your deposit build up exponentially faster, while saving you both time and money for turn-around of critical path equipment and clean-up.

Founded in 1923, Conco is the world's leading provider of condenser and heat exchanger services with offices located in the US, Europe, and Asia Pacific.
